

Sustainable Products

At EMC, we embrace a culture of personal responsibility and stewardship for quality and the environment in everything we do. We are fueled by the trust our customers place in us to deliver premium, quality products made from recycled tire rubber (Crumb Rubber).

Crumb Rubber is extremely durable and resilient making it an excellent material for use in many products encountered in everyday life in addition to its invaluable performance as an alternative energy.

Crumb Rubber degrades over a very long period of time (lifetimes), can withstand extreme temperatures, has excellent insulating properties, can be used alone (engineering and landscape projects), can be molded into various products (mats, rolls, consumer and industrial goods), can substitute for virgin or synthetic rubber (shoes, tires), or makes a great asphalt modifier (roads, coatings, roofing materials).

Products made from Crumb Rubber can be recycled again and again creating a sustainable source of raw material for new products while keeping the tire rubber out of our landfills. EMC operates **zero waste** manufacturing facilities where all scraps and product rejects are re-ground and re-used in the manufacturing process.

EMC designs, manufactures and delivers a wide range of innovative surfacing and molded products of the highest quality.

More Choice, Better Quality - The EMC Edge

Sustainable Products

DeckTop Architectural Tile

Turn your standard roof or deck into a safer, greener, more versatile space. Designed specifically for decking applications, our porous and permeable recycled rubber tiles offer superior comfort, durability and protection - all with excellent insulating properties. Create an attractive, slip-resistant, low-maintenance surface for your roof-top decks, patios, plazas, walkways and more.

Paver Tile

Enjoy underfoot comfort with our indoor/outdoor, slip-resistant, 100% recycled rubber tiles - the perfect eco-friendly alternative to traditional hardscape pavers. Create a safe, comfortable, protective floor for all your residential and commercial needs - utility areas, walkways, garages, patios, drives or around swimming pools.

Kid Kushion Playground Safety Surfacing

Keep children safe and protected from falls with our durable and resilient safety playground tiles. IPEMA certified up to 10' critical fall height rating, our tiles are a clean and safe alternative to sand, wood, grass and playground rubber mulch. With many color choices, it's easy to create an attractive design that will last for years to come.

EquiTILE

Provide unmatched safety and comfort for your horses and livestock. Made from 100% recycled rubber, these one-inch thick, interlocking tiles provide a slip-resistant, anti-fatigue surface whether wet or dry. Choose this superior, eco-friendly alternative to traditional surfacing materials for better cushion and traction, all while reducing injuries and bedding costs.

Kid Krete Poured Rubber Safety Surfacing

Realize your creatively-inspired playground design with virtually any shape or color embedded in your seamless playground surface - all while keeping children safe and protected from falls. Our poured-in-place durable surfacing meets ASTM 1292 requirement for head impact attenuation and GMAX and is easily customized to meet the safety, design, and artistic requirements of any playground, school, community center or daycare.

SportPlay Mat

Play harder and reduce fatigue with our versatile, durable rubber tile covering your floors. Our one-inch thick, shock absorbent, skid-resistant safety tiles soften the areas you need most - fitness centers, yoga studios, daycare centers, retirement homes, home gyms and more. Designed in a variety of colors and surfacing choices to satisfy all of your aesthetic needs.

Custom Manufacturing

We continue to expand our product line and services to meet emerging customer needs. Our broad range of capabilities includes designing, molding and producing recycled rubber solutions for a wide range of applications, including solar energy and gaming. From assistance in initial design and prototyping, to complete assembly, we work with you to deliver a high-quality product.
